

## IntelliCut Series One

### CNC Laser Cutters

IntelliCut CNC fiber laser cutters combine outstanding cutting performance with superior quality you can trust.

Our premium fiber laser range is built with trusted components to the highest standards to deliver maximum value and performance.

IntelliCut Series One CNC Laser Cutter 3000mm x 1500mm 1 KW capacity with enclosure and pallet exchanger:

Our top-tier cnc fiber laser cutters tick all the boxes, combining premium accessories, high end components, thoughtful, practical design and quality craftsmanship to deliver superb value for money. All Series One cnc fiber laser tables feature a full cabin and pallet exchanger table as standard.

The first thing you will notice are the premium accessories - a full cabin, auto focus cutting head and automatic pallet exchanger. Then the outstanding specification, including power sources from IPG and fiber laser auto focus cutting heads from Raytools as well as fast, accurate motors, gearboxes and positioning systems from Atlanta, Yaskawa and PMI. Our Series One fiber laser pulls no punches, but delivers amazing value for money at just 20% more than our aggressively priced Series Two model.

Enjoy peace of mind with a reliable, high production capable cnc fiber laser backed by great after sales service. IntelliCut fiber lasers deliver on the MTO promise of 'Right Quality, Right Price'.

#### The Right Technology:

IntelliCut Lasers have years of R&D experience in small and medium-power laser cutting machines invested in them, combined with advanced design, precision production and quality components.

#### The Right Efficiency:

Easy to use control for job set up, capacitive auto focus head for plate detection and height control, compact footprint and easy loading, single-axis movement speed of up to 100m/min, re-position accuracy of 0.03, position accuracy of 0.05, and single-axis acceleration of up to 1G delivers accurate, high speed, industrial level production.

#### The Right Accuracy:

A double drive, aircraft grade aluminium cast gantry, coupled with a solid cast cellular machine frame that has been annealed and aged after welding ensures excellent rigidity. Matched to this is a set of PMI linear guides, Atlanta

Relative to our competitors, our lasers offer a unique mix of both value for money and exceptional quality and performance.

### The Right Stability:

IntelliCut lasers embody practical and simple design to take full advantage of maintenance free fiber laser transmission in laser cutting. The technology is mature and the Cypcut control software is proven for years of trouble free production.

### The Right Price:

IntelliCut Lasers stay true to the MTO promise of exceptional value for your money rather than being the cheapest on the market.

Processing range	X axis stroke (mm)	Y axis stroke (mm)	Z axis stroke (mm)	X axis speed (m/min)	Y axis speed (m/min)	Max acceleration (m/s <sup>2</sup> )	Positioning precision (mm)	Re-positioning precision (mm)	Max load of worktable (kg's)	Dimensions (AxBxCxH) (mm)	Weight (kg's)

- Cutting range:**  
3000mm x 1500mm.
- Capacities:**  
500w, 700w, 1000w, 2000w.
- Control:**  
CypCut control with friendly user interface, full system parameters control (cutting speed, torch height, air pressure etc.), graphical processing of drawings, drawing library, automatic nesting, cut simulations, DXF, AI as well as G code file format importing, USB interface and more.
- Machine frame:**  
Solid cast table with cellular internal structure, annealed and aged for stress relief to avoid deformation after welding. Includes drawer trolley for cut parts access.
- Gantry:**  
Double drive aircraft grade cast aluminium gantry featuring whole body machining for rigidity and accuracy.
- Cabin:**  
IntelliCut Series One laser includes full cabin for safety and laser radiation blocking.
- Exchange:**  
Only available in conjunction with cabin, to load and unload plates automatically.
- Drive system:**  
Japanese Yaskawa drives and motors.
- Guide system:**  
Taiwanese PMI linear guides
- Rack/Pinion/Reducers:**  
American Atlanta system.
- Optical path:**  
Optical fibre with no reflective lenses required for maintenance free operation.
- Cutting head:**  
Swiss Raytools BT 240 auto focus cutting head with capacitive sensor for plate detection, height control and real time adjustment of laser output power to avoid over burn on corners. Anti-reflection optics for aluminium and brass cutting.
- Laser source:**  
American IPG laser source featuring water cooling, very low maintenance, gas free operation and requires no adjustments.
- Electrical:**  
German Weldmuller components, Japanese Omron limit switches.
- Cooling system:**  
Highly efficient water cooling system with required filters.
- Optional auxilliary gas system:**  
Nitrogen and clean, dry compressed air can be used. Requires compressor, refrigerator dryer unit and coalescing filter.
- Exhaust system:**  
Suction system for expelling dust and gas from the table.
- Lubrication:**  
Central lubrication system distributes oil to the required components.
